

Appendix A

Suicide-Associated Near-Death Experiences: A Comparative Analysis of 42 Cases and 937
Non-Suicide-Associated Cases

Readable PDF edition of the complete workbook

All six worksheets are included. Wide tables are divided into companion panels so the text and statistical values remain readable. Comparison numbers, periods, and variable names link matching rows across panels. No worksheet wording or statistical values were changed.

1. Appendix A: Publication Verification Pass v2
2. Content findings robust across Pearson BH, Fisher/MC probability-order, and Monte Carlo sensitivity
3. Pearson $p < .05$ findings to label nominal/exploratory
4. All 77 workbook comparison blocks with Pearson, Fisher/MC probability-order, Monte Carlo, ordinal p/q values, and effect sizes
5. Before/after attitude comparisons
6. Analysis notes for manuscript preparation

Prepared August 16, 2026

Appendix A: Publication Verification Pass v2

Source workbook	SUICIDE MASTER 979 NDE Chi-Square Two Data Set Analysis Greyson 7.xlsx
Analytic sample	42 suicide-associated NDEs vs. 937 non-suicide-associated NDEs; N = 979
Study date range	November 19, 2011 to December 28, 2023
Inclusion criteria	English-language, first-person, single-account NDEs with Greyson NDE Scale score ≥ 7
Workbook comparison blocks verified	77 numeric CHITEST comparison blocks parsed and recomputed
Primary reproduction	All workbook CHITEST p values matched recomputed Pearson chi-square p values to tolerance $< 1e-10$.
Sensitivity analyses added	Fisher exact p values computed for 2 x 2 tables; Fisher-style Monte Carlo probability-order p values computed for larger 2 x k tables; Monte Carlo chi-square-tail p values computed from 200,000 fixed-margin random tables per comparison.
Multiple testing	Benjamini-Hochberg q values computed separately for Pearson, Fisher/MC probability-order, Monte Carlo, and ordinal p-value families.
Robust content findings	Peace/pleasantness; Joy; Boundary/limiting structure (Y/U/N); Future scenes
Nominal/exploratory content findings	10 Pearson $p < .05$ findings did not remain robust across corrected families; keep these exploratory.
Before-NDE attitude finding	5 before-NDE attitude variables remained robust across exact/MC sensitivity families.
After-NDE attitude finding	After-NDE between-group differences were much smaller; no after-NDE attitude variable was robust across Pearson, Fisher/MC probability-order, and Monte Carlo BH families.
Privacy note	No names, addresses, telephone numbers, email addresses, contact restrictions, or free-text narrative fields were copied into this verification workbook.

Content findings robust across Pearson BH, Fisher/MC probability-order, and Monte Carlo sensitivity

This worksheet is presented in two companion panels. Use Comparison # and Short label to match each finding.

Panel 1: Counts and category distributions

Comparison #	Short label	Suicide-associated counts (%)	Non-suicide-associated counts (%)
18	Peace/pleasantness	Incredible peace or pleasantness: 20 (47.6%) Relief or calmness: 9 (21.4%) No: 13 (31.0%)	Incredible peace or pleasantness: 738 (78.8%) Relief or calmness: 147 (15.7%) No: 52 (5.5%)
19	Joy	Incredible joy: 14 (33.3%) Happiness: 6 (14.3%) No: 22 (52.4%)	Incredible joy: 506 (54.0%) Happiness: 218 (23.3%) No: 213 (22.7%)
39	Boundary/limiting structure (Y/U/N)	Yes: 20 (47.6%) Uncertain: 1 (2.4%) No: 21 (50.0%)	Yes: 222 (23.7%) Uncertain: 135 (14.4%) No: 580 (61.9%)
42	Future scenes	Scenes from the world's future: 1 (2.4%) Scenes from my personal future: 13 (31.0%) No: 28 (66.7%)	Scenes from the world's future: 54 (5.8%) Scenes from my personal future: 93 (9.9%) No: 790 (84.3%)

Panel 2: Statistical tests, effect size, and manuscript note

Compari son #	Short label	Recomputed Pearson chi-square p	Pearson BH q	Fisher/MC probability-order p	Fisher/MC probability-order BH q	Monte Carlo chi-square-tail p	Monte Carlo BH q	Cramer's V	Manuscript note
18	Peace/pleasantness	1.7468E-10	1.3450E-08	5.0000E-06	0.0004	5.0000E-06	0.0004	0.2142	Central affective difference; largest Cramer V among verified content comparisons. Preserve nuance that direct pleasant/distressing-content item was not significant.
19	Joy	6.2185E-05	0.0022	0.0002	0.0069	6.5000E-05	0.0025	0.1407	Central affective difference; reinforces peace/pleasantness finding.
39	Boundary/limiting structure (Y/U/N)	0.0007	0.0142	0.0008	0.0154	0.0011	0.0215	0.1214	Boundary/limiting-structure finding; interpret alongside non-significant NDE Scale border/point-of-no-return item.
42	Future scenes	8.5612E-05	0.0022	0.0007	0.0154	0.0006	0.0166	0.1383	Central content difference, driven by personal future scenes.

Pearson p<.05 findings to label nominal/exploratory

This worksheet is presented in two companion panels. Use Comparison # and Short label to match each finding.

Before/after attitude comparisons

The before-and-after attitude comparisons are divided into three companion panels. Match rows by Period and Variable.

Panel 1: Period, variable, categories, and counts

Period	Variable	Source column #	Category order	Suicide-associated counts (%)	Non-suicide-associated counts (%)	n suicide	n non-suicide	n total
Before NDE	Belief life meaningful before	150	Are meaningful and significant Are probably meaningful and significant Are possibly meaningful and significant Are not meaningful and significant Unknown	Are meaningful and significant: 6 (14.3%) Are probably meaningful and significant: 5 (11.9%) Are possibly meaningful and significant: 10 (23.8%) Are not meaningful and significant: 18 (42.9%) Unknown: 3 (7.1%)	Are meaningful and significant: 263 (28.1%) Are probably meaningful and significant: 181 (19.3%) Are possibly meaningful and significant: 230 (24.5%) Are not meaningful and significant: 114 (12.2%) Unknown: 149 (15.9%)	42	937	979

Analysis notes for manuscript preparation

Topic	Note
Exact p definition	For 2 x 2 tables, the Fisher/MC probability-order column is Fisher exact. For larger 2 x k tables, that column is a Fisher-style Monte Carlo probability-order p value. The separate Monte Carlo chi-square-tail p column uses the Pearson chi-square statistic tail under fixed margins. These p values are related sensitivity checks but not identical tests.
Monte Carlo minimum	When zero simulated tables were as extreme as observed, the plus-one estimate is $1/(200000+1) = 4.99998\text{e-}06$; this should be read as p less than the simulation resolution, not as an exact p value.
Privacy	No account-level identifiers, names, addresses, phone numbers, emails, or narrative text were copied into this workbook.
Appendix title	This workbook is titled Appendix A.
